

# Redesigned Discounts Setup Screen

Version 10.0.800

## UI Improvements: Discounts Setup Screen

The discounts setup area has been redesigned to minify the screen and simplify the user experience.

The components of the setup screen have been rearranged and sectionalized to better accommodate the steps a user must take to add or edit a discount. Sections now include titles, reworked descriptions, and helpful tips.

### Create Discount

The main part of the discounts screen is now more pronounced to intuitively lead the user to this section. The shortcut keys to quickly make a manager discount and open reason discount have been relocated to the main section.

### Items Needed to Match Per Transaction

If this is set to 0, the discount **Type** and **Amount** applies to the entire check. If a number is set in this field, you must assign the discount to menu items, categories or departments using the **Assigned Items** box. Now, these two areas have been combined into one section to make it more understandable.
